ProSAFE® WC7600v2 Premium Wireless Controller

Data Sheet

WC7600v2

High Performance Enterprise-Class Wireless Controller

The NETGEAR* ProSAFE* WC7600v2 Premium Wireless Controller is a fully featured enterprise class, high performance and secured wireless controller capable of managing up to 150 Access Points and 6,000 concurrent clients per cluster. The WC7600v2 delivers ultra-fast Access Point discovery, Layer 2 and Layer 3 fast roaming, a captive portal for guest access, fully distributed architecture, and ease of configuration and management.

The NETGEAR ProSAFE WC7600v2 Premium Wireless Controller manages the full line of NETGEAR ProSAFE Access Points, from entry level single band APs (WNAP210 and WNAP320), business class dual band APs (WNDAP350 and WNDAP360), high performance 3x3:450 Mbps per radio dual band concurrent APs (WNDAP660), to specialized in-wall mounted APs (WN370) and outdoor APs (WND930) to a full line of industry fastest 802.11 ac APs (WAC720 and WAC730) all with a single click of a mouse.

Unlike other Wireless systems that are costly, complex and cumbersome to deploy, the WC7600v2 wireless controller is ideal for K-12 education, hospitality, and healthcare deployments. Designed with simplicity in mind for management and ease of use, it offers enterprise grade functionality and capability for small to mid-sized organizations, without the cost and complexity of big IT.

Features

Highly scalable

- Supports up to 50 Access Points and 2,000 concurrent clients per controller
- Stack up to three WC7600v2 per cluster
- Supports up to 150 Access Points and 6,000 concurrent clients per controller cluster

Ultra-fast Access Point discovery with Ufast $^{\mbox{tm}}$

- Ufasttm AP discovery provides super-fast AP discovery
- · Improves reliability and shortens setup time
- \cdot Secured communication between AP and WC7600v2

Distributed and local forwarding

- Data traffic forwarded to the best path without traversing the controller
- Eliminates controller bottleneck for high throughput 802.11n and 802.11ac APs
- Intelligent tunneling with Layer 2 and Layer 3 roaming
- High Redundancy

Enterprise-grade and feature-rich

- Layer 2 and Layer 3 seamless roamingDynamic RF adjustments
- WLAN healing for automatic RF coverage in the case of AP failure
- Roque AP detection
- Bandsteering to optimally load balance traffic between 2.4 and 5GHz

Investment protection

- Dynamically moves clients from a congested frequency (typically 2.4GHz) onto a less congested one (5GHz)
- Supports 802.11n and 802.11ac ProSAFE Access Points

Industry-leading warranty

This product is backed by a NETGEAR limited ProSAFE® Lifetime Hardware Warranty

- ProSUPPORT Lifetime Chat Technical Support (Remote diagnostics performed by our technical experts for prompt resolution of technical issues)
- ProSUPPORT 90 days Live Phone Technical Support 24 x 7
- Lifetime Next Business Day (NBD) Hardware replacement (See http://onsite.netgear.com for coverage, availability and terms and conditions)
- Includes Lifetime Next Business Day Hardware Replacement

ProSAFE° WC7600v2 Premium Wireless Controller

Data Sheet

WC7600v2

Supported Access Points

Access Points	Description	Typical Deployment	Product Image (Front)	Product Image (Back)
WAC730	Wireless-AC 3x3:1.7 Gbps High Performance Access Point	Medium to large enterprise, higher education, mid to large hotels and hospitals requiring ultra high density throughput	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	
WAC720	Wireless-AC 2x2:1.2 Gbps Premium Access Point	Medium enterprise, higher edu- cation, hospitality requiring high density and throughput	and the second	
WNDAP660	Wireless-N 3x3:900 Mbps Dual Band Concurrent Premium Access Point	Medium enterprise, higher education, mid-sized hotels and hospitals		
WNDAP360	Wireless-N 2x2:600 Mbps Dual Band Concurrent Access Point	Small to medium enterprise, K-12 schools with advanced Wi-Fi, hotels, mid-sized hospitals		
WNDAP350	Wireless-N 2x2:600 Mbps Dual Band Concurrent Access Point (Metal)	Warehouse, transportation, hardened locations		· # • • • • •
WNAP320	Wireless-N 2x2:300 Mbps Single Band Access Point	Small to medium enterprise, K-12 with basic Wi-Fi		E S S THA
WNAP210	Wireless-N 2x2:300 Mbps Single Band Access Point	Entry level small to medium enterprise	annu a sa a	
WN370	Wireless-N 2x2:300 Mbps Wall Mount Single Band Access Point	Small to medium hospitality requiring per room wire/wireless access		
WND930	Wireless-N 2x2:600 Mbps Dual Band Concurrent Outdoor Access Point	Outdoor deployment in schools, hospitalities, parking lots	NETGEAR V

ProSAFE® WC7600v2 Premium Wireless Controller

Data Sheet

WC7600v2

Features

Scalable Architecture

The NETGEAR WC7600v2 Premium Wireless Controller supports up to 50 APs (with activation of 5 individual 10 AP licenses) and is stackable up to three controllers in a cluster to support up to a total of 150 Access Points. To activate the management of AP, a pay-as-you go licensing of 10 AP licenses ensure that the user only pays for what is needed.

Centralized Management

Deployed as an overlay on the existing wired network infrastructure, the NETGEAR ProSAFE WC7600v2 Premium Wireless Controller simplifies the network management by providing a single point of management for the entire wireless network. Easy to set up, the WC7600v2 Controller discovers all supported access points in the network, even across VLANs and subnets. Once identified, the access points are provisioned in minutes. The discovery process follows an efficient and fast protocol in Ufast[™].

Robust Security

With identity-based security features such as support for RADIUS, Active Directory and internal or external AAA server, the NETGEAR ProSAFE WC7600v2 Premium Wireless Controller truly unifies wired and wireless access without compromising on security. Management VLAN is configurable and up to 8 security configuration profiles (SSID, 802.11i security, VLAN, ACLs, radio parameters) can be active. Roque AP detection permits roque APs classification (friendly or hostile). Standard RADIUS compliance enables support for third-party authentication and billing system implementation. Scheduled wireless on/off times permits the wireless network to be completely unavailable during specified nonbusiness hours.

Guest Access, Captive Portal and Logging

Guest access allows restricted access to the network, using an integrated captive portal. Two methods of entry are provided, either assisted or self-certified. In the assisted model, the receptionist can create a user name and password for quests in the GUI and the NETGEAR ProSAFE WC7600v2 Premium Wireless Controller hosts a captive portal where quests can enter their pre-configured credentials to gain access to the network. Alternatively, the NETGEAR ProSAFE WC7600v2 Premium Wireless Controller hosts a quest portal where quests can register themselves before entering the network. Backend VLAN policies ensure restricted access to quests, prohibiting them any access to the sensitive data on the corporate network. Guest activity logs are available.

RF Management and Hole Detection

Automatic control of AP transmit power and channel allocation ensures coverage by minimizing interferences. Automatic WLAN healing after loss of AP or due to RF interferences adapts the power and channel of the other APs around the area. Scheduled automatic channel allocation authorizes an enterprise-class reliable wireless experience.

UFast™

Ufast is an innovative approach to expedite the communication between the AP and the Controller during the discovery process. Typical AP to controller discovery can take multiple seconds and depending on the number of AP's in the network, the discovery process can take minutes. With the Ufast protocol, the AP discovery is nearly instantaneous, and resulting in an fast and easy set up stage.

Load Balancing and Rate Limiting

Automatic load balancing of clients across APs is provided based on number of clients per AP and signal strength threshold/data rate threshold of clients on the BSS. Rate limiting is provided by SSID. Load balancing and rate limiting ensure fair bandwidth allocation among all clients for robust wireless connectivity.

Bandsteering

Bandsteeering provides the capability to automatically direct dual band clients to the most desired frequency band (2.4 or 5 GHz) to improve client's experience and maximize over the air resources.

Fast Roaming and Voice over WiFi

The NETGEAR ProSAFE WC7600v2 Premium Wireless Controller supports rapid mobility across VLANs and subnets including 802.11i pre-authentication and fast roaming support (FRS). Seamless L2 and L3 roaming provides support for latency-sensitive applications such as video, audio and voice over wireless. WiFi Multimedia (WMM) advanced prioritization extends WiFi's high-quality end-user experience to voice applications (VoWi-Fi).

Monitoring and Reporting

The WC7600v2 uses a heartbeat mechanism between the controller and the AP. It is monitored based on several factors, such as RF interference, clients, error levels, etc. Each AP is constantly monitored (number of clients, traffic load, RF interference, packet error levels and retransmission statistics). Statistics provide reliable metrics per AP, per client, per floor and for the entire wireless network.

Performance

The best of centralized and distributed architectures are implemented by the NETGEAR ProSAFE High Capacity Wireless Controller for outstanding Wireless-N performance. Local traffic is automatically switched at the access points level for fastest processing, when roamed L3 traffic is processed at the controller level with advanced data control. Real-time applications such as VoWi-Fi require perfect inter-subnet/inter-VLAN mobility: WC7600v2 encryption tunneling delivers enterprise-class fast roaming without any impact on Layer 2/Layer 3 performance.

Supported Access Points

Supporting standard NETGEAR access points, the WC7600v2 High Capacity Premium Wireless Controller enables customers to select the right access points for their needs, including mixing models to provide the right coverage. The standard access points are converted to dependent access points. Supported models include professional-class ProSAFE access points WAC730 and WAC720 (802.11ac ultra high performance), WNDAP660 (high performance dual band concurrent), WNDAP360 (dual band), WNDAP350 (dual band), WNAP320 (single band), WNAP210 (single band), WN370 (wall mount single band), WND930 (outdoor) and WNDAP380Rv2 (integrated WiFi and RFID) all with Power over Ethernet capabilities and lifetime warranties.

Example Deployment

ProSAFE° WC7600v2 Premium Wireless Controller

Data Sheet

WC7600v2

Technical Features

RF MANAGEMENT				
Automatic Channel Allocation	 Automatic channel distribution to minimize interferences Auto-channel allocation taking into consideration of the environment, interferences, traffic load and neighboring AP Modifiable list of corporate channels to be used Scheduled mode for Auto-channel allocation Automatic mode in case of high level of interferences available 			
Automatic Power Control	 Optimum transmit power determination based on coverage requirements Automatic power control mode available Neighborhood scan of RF environment to minimize neighboring AP interference and leakage accross floors 			
Coverage Hole Detection	 Automatic mode or Manual mode Down APs or compromized RF environment detection with alerts Self healing: automatic neighboring AP power increase to cover coverage losses 			
Load Balancing	 APs load monitoring and overloading prevention Clients redirection to lightly loaded neighboring APs 			
Fast Roaming	 Seamless rapid mobility across VLAN and subnets Including 802.11i pre-auth and fast roaming Fast Roaming support accross L2, and L3 for video, audio and voice over wireless client 			
QUALITY OF SERVICE				
WMM Quality of Service	WMM (802.11e) prioritizes traffic for both upstream traffic from the stations to the Access Points (station EDCA parameters) and down stream traffic from the Access Points to the client stations (AP EDCA parameters)			
WMM Queues in decreasing order of priority	 Voice: The highest priority queue with minimum delay, which makes it ideal for applications like VoIP and streaming media Video: The second highest priority queue with low delay is given to this queue. Video applications are routed to this queue Best Effort: The medium priority queue with medium delay is given to this queue. Most standard IP application will use this queue Background: Low priority queue with high throughput. Applications, such as FTP, which are not time-sensitive but require high throughput can use this queue 			
WMM Power Save option	WMM Power Save helps conserve battery power in small devices such as phones, laptops, PDAs, and audio players using IEEE 802.11e mechanisms			
WIRELESS SECURITY				
Client Authentication Protocols	 Open, WEP, WPA/WPA2-PSK 802.11i/WPA/WPA2 Enterprise with standard interface to external AAA / RADIUS Server 			
Distinct AAA Server per SSID	Yes			
RADIUS Accounting Protocol	Per Client tracking for: • Bytes Tx/Rx • Login/Logout Time			
LDAP Based Authentication	 Standard interface to external LDAP Server / Microsoft® Active Directory Server Per Client Based LDAP policies for user bandwidth rate limiting available 			
Integrated AAA Server	Local Database Authentification based on WC7520 internal RADIUS Server			
Guest Access	 Integrated Captive Portal available for client authentication in a Security Profile Password based authentification mode: local user store available, receptionist assigned user name / password Open authentification mode: guests auto registration with email address (up to 64 email stored) Extraction of logs of guest activity 			
Captive Portal	Configurable Portal page, including image files			
Rogue Access Points	 Rogue AP definition: AP with radio SSID oberved by any of the Managed AP and seen transmitting on same L2 wired network Detection and Mapping of up to 512 Rogue APs
